

OIL DRIPPER TYPE ETR 10490 PLEXIGLASS

Model: 11 490 11 01

Description

Turned design of solid brass - with metering spindle for the exact drop dosing - easy visual inspection of drop fall - inspection glass of plexiglas or natural glass.

These UNI drip feed lubricators can be used universally, e.g. in building machinery, agricultural machines, conveying and transport equipment as well as in all sections of the general machinebuilding industry.

With the UNI drip feed lubricators MOS (electrically controlled) automatic central lubrication systems can be combined for any application.

It is also possible to feed the lubricant to the drip feed lubricators through the circuit of a gear pump.

For the simultaneous supply of several lubricating points, the UNI drip feed lubricators ETR can be connected in one supply line one behind the other.

The metering spindles permit an dosing for each lubricating point to be supplied. The lubrication equipment structured in this way is centrally switched on and off through the connected oil dispenser.

Technical data

Connection	1/8
Height	70 mm
