

PELA MANUAL VACUUM PUMP, 14 LITER CAPACITY

Model: PL-14K

Description

The PL-14K is a large pump (especially for heavy engines, boats or multiple engines at the same time) with a capacity of 14 liters.

The model is maintenance-free and durable because the pump is located in the reservoir.

The vacuum is created by pumping 20 to 25 times in a row. The pump automatically stops suction as soon as the maximum content is reached.

However, the content can also be read through the transparent reservoir.
